

Business Sales Performance Analytics Report

Future Interns – Data Science & Analytics Internship

Task 1: Business Sales Performance Analytics

Prepared By: Priyam Singh

Repository: https://github.com/priyam-10/FUTURE_DS_01

Tools Used: Python, Pandas, NumPy, Matplotlib, Seaborn

Executive Summary

This project analyzes sales performance using the Superstore dataset containing 9,994 retail transactions. The objective was to evaluate revenue trends, regional performance, category profitability, and product performance to generate actionable business insights.

The analysis revealed total sales of **\$2.30 Million** and total profit of **\$286.40 Thousand** across **5,009 orders** from **793 unique customers**. Technology emerged as the highest-performing category, while the West region generated the highest sales revenue.

Project Objective

The objectives of this project were to:

- Analyze overall sales and profit performance.
 - Identify regional sales contributions.
 - Evaluate category-wise profitability.
 - Determine top-selling products.
 - Generate business recommendations using data-driven insights.
-

Dataset Overview

The Superstore dataset contains transactional retail data including:

- Orders and sales information
- Product categories and sub-categories

- Customer information
- Regional sales data
- Profit and shipping details

Dataset Statistics

Metric	Value
Total Records	9,994
Total Orders	5,009
Total Customers	793
Total Sales	\$2.30M
Total Profit	\$286.40K

Sales Performance Analysis

Revenue Performance

The business generated total sales of **\$2.30 Million** and achieved a total profit of **\$286.40 Thousand**.

The positive profit performance indicates effective revenue generation; however, opportunities remain to improve margins and increase profitability across product categories.

Regional Performance Analysis

Regional sales analysis revealed significant differences in market performance.

Region	Sales
West	\$725.46K
East	\$678.78K
Central	\$501.24K
South	\$391.72K

Key Insight

The **West region** generated the highest sales revenue, contributing approximately 31.6% of total sales. The **South region** recorded the lowest sales performance, indicating potential opportunities for market expansion and targeted sales strategies.

Category Performance Analysis

Sales by Category

Category	Sales
Technology	\$836.15K
Furniture	\$742.00K
Office Supplies	\$719.05K

Profit by Category

Category	Profit
Technology	\$145.45K
Office Supplies	\$122.49K
Furniture	\$18.45K

Key Insight

Technology was the strongest-performing category in both sales and profit. Although Furniture generated substantial revenue, it delivered significantly lower profit, suggesting higher costs, discounts, or operational inefficiencies.

Product Performance Analysis

Top-Selling Products

Product	Sales
Canon imageCLASS 2200 Advanced Copier	\$61.60K
Fellowes PB500 Electric Binding Machine	\$27.45K
Cisco TelePresence EX90 System	\$22.64K
HON 5400 Series Task Chairs	\$21.87K
GBC DocuBind TL300 Binding System	\$19.82K

Key Insight

A small group of high-performing products contributes a substantial portion of total revenue. These products represent important opportunities for targeted marketing, inventory prioritization, and customer retention initiatives.

Key Findings

1. The business generated total sales of **\$2.30M** and profit of **\$286.40K**.
2. The **West region** achieved the highest sales performance.

3. The **Technology category** led both sales and profitability.
 4. Furniture generated strong revenue but comparatively low profit.
 5. Several premium products contributed significantly to overall sales performance.
-

Recommendations

1. Increase Investment in Technology Products

Technology products generated the highest revenue and profit and should remain a primary business focus.

2. Improve Furniture Profitability

Review pricing strategies, discount policies, and operational costs associated with Furniture products.

3. Expand Success in High-Performing Regions

Analyze successful sales practices in the West region and apply similar strategies in lower-performing regions.

4. Prioritize High-Revenue Products

Ensure sufficient inventory and promotional support for top-performing products.

5. Strengthen Regional Sales Strategy

Develop targeted marketing campaigns to improve sales performance in the South region.

Conclusion

This analysis successfully evaluated business performance using transactional sales data from the Superstore dataset. The findings highlight strong performance in the Technology category and the West region while identifying opportunities to improve profitability within Furniture and expand sales in lower-performing markets.

The insights generated through this project demonstrate how data analytics can support informed business decisions and contribute to revenue growth, operational efficiency, and long-term profitability.
